

MATANZAS PASS/FT. MYERS BEACH ANCHORAGE

Bathymetry in feet at mean lower low water. Field mapping by DGPS and traverse methods. Bottom sediment type and sea grass areas diver observed. **All sea grass beds should be considered non-navigable and not suitable for anchoring.**

The Matanzas Pass/Ft. Myers Beach Anchorage is situated 3.3 statute miles from the Sanibel/Point Ybel anchorage and 6.9 statute miles from the Punta Rassa anchorage.

This photomap was prepared to help boaters identify sensitive marine habitats and shoal areas where traffic and anchoring should be avoided. **Mariners must bear all responsibility for seamanship, piloting, and navigation. This photomap is not intended for navigation.**

Prepared under the Florida Sea Grant College Program with support from the West Coast Inland Navigation District, the Sarasota Bay National Estuary Program, and the NOAA Coastal Services Center. For further information on this anchorage, see the Southwest Florida Non-Regulatory Anchorage Management Program home page at <http://gnv.ifas.ufl.edu/~seaweb/homepage/anchor.htm>.

Map compilation and design by the Cartographic Staff, Florida Sea Grant College Program, University of Florida, Gainesville, Florida, January, 1998. This photomap is a publication of the Florida Sea Grant Program, Extension Fact Sheet SGEF-56.
