## Table of Contents

List of Figures.....	ii
Acknowledgements.....	iii
Introduction.....	1
What Is Success?.....	2
Site Selection.....	3
Site Surveys.....	6
Factors Influencing Planting Success.....	9
1) Elevation.....	9
2) Slope and Drainage.....	17
3) Substrate.....	26
4) Planting Rationale.....	32
Mangroves.....	33
Smooth Cordgrass.....	38
Other Species.....	41
Density.....	41
5) Site Design.....	44
6) Human Intrusion.....	49
7) Plant Quality.....	51
8) Monitoring.....	54
Summary.....	64
Concluding Remarks.....	70
Literature Cited.....	72
APPENDIX A: Florida Keys Site Descriptions	
APPENDIX B: Atlantic Coast Site Descriptions	
APPENDIX C: Gulf Coast Site Descriptions	
APPENDIX D: Tables	

## List of Figures

Figure 1.	Site locations.....	5
Figure 2.	Standard sampling methodology.....	7
Figure 3.	Generalized locations of common intertidal plant species in mud substrates of peninsular Florida.....	13
Figure 4.	Tidal types and ranges in Florida.....	15
Figure 5.	Movement of red mangrove, as it matures, into deeper water that is inappropriate for seedling colonization.....	18
Figure 6.	Effect of slope on the extent of intertidal vegetation along marine shorelines.....	19
Figure 7.	Projected effect of slope at marine wetlands margins on extent of vegetation as sea level rises.....	23
Figure 8.	Exotic nuisance-species invasion of marine wetlands margins as influenced by the interaction of slope and disturbance.....	25
Figure 9.	Observed responses of planted red mangrove seedlings in hard (limerock) and soft (marl mud) substrates in the Florida Keys.....	27
Figure 10.	Fruiting (propagule) characteristics of Florida mangrove species.....	37
Figure 11.	Smooth cordgrass vegetative and seed- production characteristics.....	39
Figure 12.	Suggested schedule for monitoring a smooth cordgrass marsh-creation project..	62
Figure 13.	Characteristics of a hypothetical unsuccessful saltmarsh creation project..	65
Figure 14.	Characteristics of a hypothetical successful saltmarsh creation project....	66

### Acknowledgements

This publication is the result of the unselfish contributions of many individuals. We thank all those who took the time to fill out site-location questionnaires.

Many government-agency personnel spent considerable time and effort providing site histories. Special recognition is due personnel of the U.S. Army Corps of Engineers, especially Curtis Kruer (Florida Keys), Sharinda Bohall (Fort Myers), Irene Sadowski (Merritt Island), and Steven Calvarese (Jacksonville), who helped identify potential study sites. Liberta Poolt (FDNR, Indian River Lagoon) and Belinda Perry (Sarasota County Natural Resources Department) provided valuable assistance, as well.

Robert Whitman, Gene Bauer, Rich Appechello, Pete Bottone, Beverly Campbell, Rob Mattson, Mike Gallagher, and Jeffrey Churchill assisted with fieldwork. Artwork was created by David Crewz, Robert Whitman, and Melanie Trexler.

Extensive and helpful review comments were made by Dr. Karen Steidinger, Beverly Roberts, Judy Leiby, Dr. Carmelo Tomas, Frank Courtney, and Sally Treat. Linda Boyette, Judy Grimshaw, Karen Murburg, Debra Sobers, and Darlyn Stockfisch helped with document preparation.

Funding for this project was provided by Florida Sea Grant and Florida Department of Natural Resources.
