ENVIROMENTAL SURVEY TECHNIQUES
FOR COASTAL WATER ASSESSMENT
CONFERENCE PROCEEDINGS

presented by
WATER RESOURCES RESEARCH CENTER and SEA GRANT COLLEGE PROGRAM
University of Hawaii at Manoa
with co-sponsor
HAWAII WATER POLLUTION CONTROL ASSOCIATION

16-17 January 1980
Honolulu, Hawaii
ENVIRONMENTAL SURVEY TECHNIQUES
FOR COASTAL WATER ASSESSMENT
CONFERENCE PROCEEDINGS

Presented by
WATER RESOURCES RESEARCH CENTER
and
SEA GRANT COLLEGE PROGRAM
UNIVERSITY OF HAWAII AT MANOA
Cosponsored by
HAWAII WATER POLLUTION CONTROL ASSOCIATION

16-17 January 1980
Hilton Hawaiian Village
Honolulu, Hawaii

Sea Grant Cooperative Report
UNIHI-SEAGRANT-CR-80-01

This proceedings was published in part by the
University of Hawaii Sea Grant College Program,
under Institutional Grant Number NA79AA-D-00085
from NOAA, Office of Sea Grant, Department of
Commerce; and the Water Resources Research
Center, University of Hawaii at Manoa.
This conference proceedings was published and distributed to each of the registrants at the conference; consequently, it contains only the prepared texts of the conference speakers. Discussions of the individual papers, as well as the evaluations, conclusions, and recommendations of the panelists, are not included in this publication. However, a summary of this conference, with special emphasis on the results of the panel sessions will be prepared and made available to all registrants of this conference and to other interested persons.
FOREWORD

The coastal waters of Hawaii have traditionally played a vital role in the cultural heritage of its people and have served as a source of food, recreation and transportation. However, these waters have also traditionally served as the ultimate sink for most of man's land-generating wastes. In recent times, the volume of waste, such as domestic sewage, industrial, agricultural and urban-developmental discharges or runoffs, has increased to the point that the quality and productivity of some coastal waters sites have been badly degraded. As a result, state and federal governments have adopted many guidelines and regulations in an effort to limit and control the assaults to our water environment. Correspondingly, many studies have been conducted to measure the various parameters of the coastal waters of Hawaii in an attempt to assess the impact of man's activities on the quality of these waters. Many of these studies represent the first of their kind in subtropical coastal waters--an environment which appears in many ways to differ from the coastal waters in the temperate zones in other parts of the world.

The primary objective of this conference is to establish a public forum whereby the various researchers engaged in their individual projects--with the common goal of assessing the coastal water environment of Hawaii--can discuss the approach and methodology of their projects to measure specific parameters, and to relate these measurements to man's activities and ultimate impact on the coastal waters. In addition, representatives of state and county agencies involved in protecting, regulating, and using the coastal waters of Hawaii were invited to expand on current regulations, standards, and their role in assessing the quality of coastal waters. Finally, experts from the University of Hawaii, the Southern California Coastal Water Research Project (Long Beach, California), and the Environmental Protection Agency Research Laboratory in Corvallis, Oregon were invited to study and evaluate the projects and the programs within the state of Hawaii.

It is our hope that this conference will result in the dissemination of information to all concerned people in our state regarding the projects and the agencies involved in assessing the quality of the coastal waters of Hawaii; and, furthermore, that an evaluation will be made regarding the adequacy of the projects and programs within the state of Hawaii. Finally, it is hoped that
conclusions will be drawn as to the current conditions of the coastal waters of Hawaii and that recommendations will be made for future action.

Roger S. Fujoika
Conference Chairman
### CONTENTS

Coastal Water Chemistry  
_Hans-Jürgen Krock._ .......................... 1

Effects of Waste-Water Discharges on Phytoplankton Communities  
_Edward A. Laws._ .......................... 13

Viruses in Water: Their Detection, Survival and Disease Potential  
_Philip C. Loh and Roger S. Fujioka._ .......................... 41

Sampling and Transecting Techniques on Tropical Reef Substrates  
_S. Arthur Reed._ .......................... 71

Micromollusks: Techniques and Patterns in Benthic Marine Communities  
_E. Alison Kay._ .......................... 91

Ecological Response of Benthic Communities to Relaxation of Sewage Stress off Sand Island, O'ahu  
_Steven J. Dollar._ .......................... 113

Temporal Changes in Fish Community Diversity Near a Sewage Ocean Outfall, Mākapu, O'ahu, Hawai'i  
_Anthony R. Russo._ .......................... 153

Water Quality Standards for Hawaiian Coastal Waters  
_Jacqueline Parnell and Melvin K. Koizumi._ .......................... 177

Integration of Coastal Water Parameters
