

Coastal Business and Environment

Increased development due to growing populations is a major threat to the health of our water and environmental resources. Planners and policymakers in the southern Lake Michigan region need tools to help them make good development decisions. They are striving for residential and industrial growth that takes place in harmony with the environmental health of this ecosystem.

Illinois-Indiana Sea Grant provides local officials and planners with measures of the value of coastal resources and helps citizens understand the tradeoffs between coastal development and conservation. The program can connect communities with technical and educational resources that help identify local natural resources at risk. And it helps local officials incorporate natural resource protection into their everyday decisions.

Illinois-Indiana Sea Grant is a joint federal and state program of the University of Illinois at Urbana-Champaign and Purdue University, West Lafayette. Sea Grant is a partnership that addresses marine and Great Lakes needs to enhance sustainable, coastal, economic development. Funding is provided by the National Sea Grant College Program, National Oceanic and Atmospheric Administration, U. S. Department of Commerce under grant number 01-COM-W-2720. The University of Illinois and Purdue University provide equal opportunities in programs and employment.
